Introduction

The First High Rise Buildings Conference Exhibition

The contemporary city is witnessing a rapid and sudden accelerated growth and development in its urban and social structure; this is a unique event that hardly occurred since the industrial revolution. Vagueness of planning policy and land use plans is a result of diverse and contradictive forces that affect the city morphology.

Within this urban scenario; high rise buildings and development become a major phenomena , in addition to being a clue on urban development on the macro and micro scale. The Arab and Jordanian cities are exposed heavily to urgent needs due to economic and investments demands in the last two decades, all within an elevated and crucial debates and discussions on how our cities should grow and expand; horizontally or vertically and on what basis this growth and development is allowed to happen in terms of character , identity and vocabulary of intervention.

Goals

The conference aims at achieving a total and comprehensive understanding and analysis of high rise buildings and development in the contemporary city; within this major goal; certain sub goals are valuable as follows:

- 1st: Define the various forces that have a major impact on high rise planning and design.
- rnd: Evaluate the current trends of multi layer systems of high rise buildings .
- rrd: Frame and facilitate the local tendencies of planning and design of high rise buildings of Amman.
