

IEEE JEA Workshop 2017

September 12-13, 2017

Track Name: Digital Transformation-Big Data Analytics, and Cloud Computing

Session Number	3 b
Title	Server Logs Analytics
Abstract	Server logs analytics provides companies and organizations with fully comprehensive views of server logs with a high level of security and feasibility, server isolation, processing historical and real time log files, and greater tracking capabilities. It can be used for all kinds of purposes such as: web analytics, intranet analytics, and even CRM and other platform based analytics.
Special Requirement	Data Show
Speaker Name	Eng. Laila Haddad
Affiliation	Big Data Engineer – INTRASOFT Middle East Amman, Jordan
Photo	
Bio	Laila is a Big Data Engineer with INTRASOFT Middle East. She is responsible for data engineering and BI/BA roles. She has obtained her BS.c in Computer Engineering from University of Jordan. Her interests are basically in the Big Data, Cloud, and Business Intelligence technologies, and using them in different domains including the social media, logs analytics, retail, and others.
